# Our Team

01 Globa Georgeana – Designer and Manager

02 Denis Smocvin – Back end

03 Maxim Cojocari-Goncear – Front end

04 Leonid Caminschi – DevOps

05 Alexandru Furdui – Front end

# The idea

How we thought of doing it

The goal of our application is to unite people through fun and interactive means. We devised a way to engage people in a fun activity – or quest – with the goal of meeting new individuals and spending time together in the end.

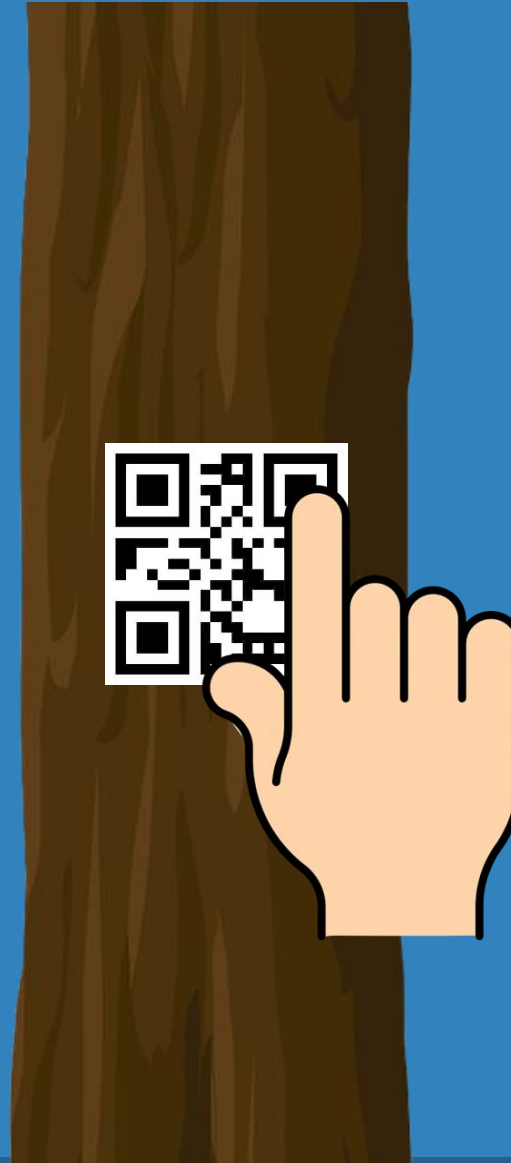

# The process

How we intended to make it

# 1. We place QR codes in the city

## 2. User scans QR code

# 3. Waiting for other users...

4. If users gather the minimum points, they win a voucher!

A large blue geometric shape, consisting of a triangle and a parallelogram, is positioned on the left side of the slide, extending from the top-left corner towards the bottom-right.

# The implementation

How we made it

# The backend

The server returns the coordinates of the QR code

The user is authenticated, and the server sends the question to be answered

The server checks if the answer is correct and awards an amount of points if it is guessed right

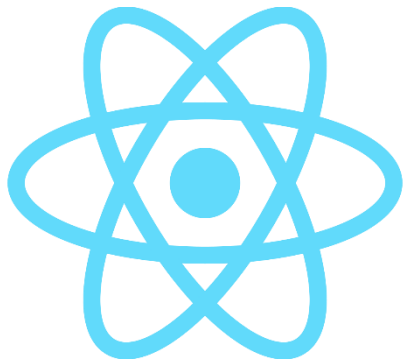

A voucher is sent to the frontend if the users collectively gathered an amount of points

# Flask

# The frontend

# Thank you

Let's reconnect and have some fun!
